

## **Organizational Changes in FY2025**

JATCO plans to provide e-Axles and other electrified powertrains to the market in addition to its automatic transmission business. In FY2025, the production of the “X-in-1” electrified powertrains, which were co-developed by Nissan, will be ready in Japan.

We will conduct the following organizational changes as of April 1, 2025 with the aim of further strengthening and accelerating our electrification initiatives.

### **Establishment of the “ePowertrain Plant”**

- The new ePowertrain “X-in-1” units will enter the mass production phase. We will separate its production site and establish a new independent facility, the “ePowertrain Plant,” in Fuji Area for the purposes of steady production of the “X-in-1” powertrains and strengthening its management system.
